Using Scopus to find articles related to key articles you have already found

Scopus allows you to:

- Find articles which have cited key articles you have already found.
- Find articles which have been referenced by key articles you have already found.
- Find other articles written by the authors of key articles you have already found.

To begin a search in Scopus enter the title of your selected article and select the Article Title field from the drop down menu.

When the article is displayed mark the box next to the title.
Finding articles which have cited your original article

To display articles which have cited this article click on the View Cited by button.

A list of such articles will be displayed. If you see an article which interests you hover over the title with the cursor. This will give you the option to read the abstract and to search the Library catalogue to discover if full text access to the article is available.
Finding articles which your original article has referenced

If you want to find articles which this article has referenced click on the three dots … and select View references.

A list of the references this article has used will be displayed. Again, if you see an article which interests you hover over the title with the cursor to view the abstract and see if it is available in full text.

Finding other articles by the author(s) of your original article

To find other articles which the author(s) of your original article has written, click on the name of the author(s).
Details about that author will be displayed together with a list of other documents they have written which are available in Scopus.
